Executive Summary

Spinebel in partnership with Hazuwa Services assist organizations and companies to meet and fulfill regulatory and stakeholders requirement in Information Security. Spinebel deploys expertise and reporting analysis in order to systematically help clients stay ahead of complex demands.

Spinebel Limited is Kaspersky Lab Authorized Cyber Security Training/Cyber Lab Center in West/East Africa.

Spinebel Vulnerability Assessment and Penetration Testing (VAPT) services evaluate and optimize information security in order to achieve organizations Confidentiality, Integrity and Availability policies and compliance objectives.

VAPT Overview

Cyber attacks are a constant threat in today's digital world. A single breach can expose sensitive data, disrupt operations, and damage customer trust.

That is where Spinebel comes in. We offer comprehensive VAPT and Cyber Security solutions, designed to safeguard your valuable information and empower your business with a robust defense.

Our team of VAPT/Cyber Security experts understands the evolving landscape of cyber threats. We will work with you to assess and implement a customized security solution that inspects all incoming and outgoing traffic, identifying and blocking malicious activity before it can harm your business.

VAPT Services Includes:

1. Vulnerability Assessment: Probe systems for known vulnerabilities and it involves assessment, scans and testing.
2. Penetration Testing: Exploit known and unknown vulnerabilities.
3. Threat and Compliance Analysis.

VAPT Activities

Vulnerability Assessment Scope:

1. Automated Scanning
2. Less Time consuming
3. Passive scanning
4. Wide Scope
5. No Exploitation.

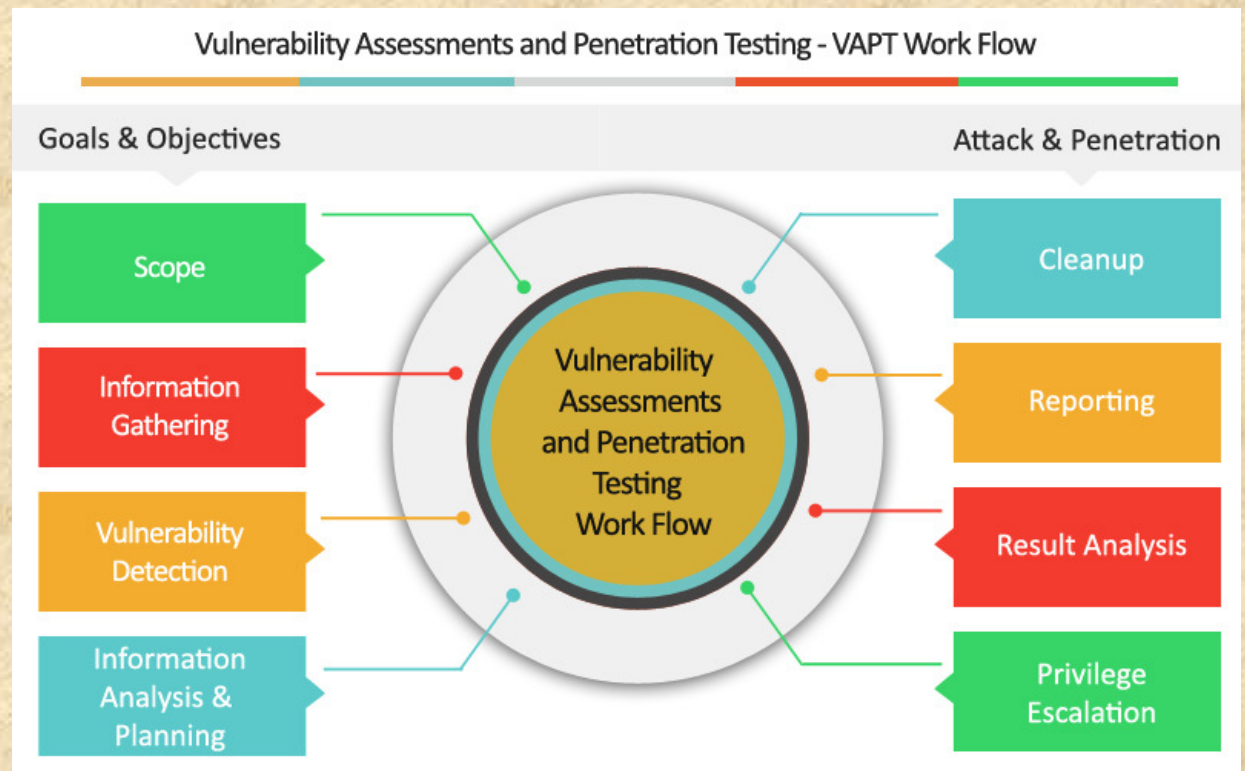

Penetration Testing:

1. Automated and Manual
2. More Time Consuming
3. Aggressive scanning
4. Focused scope
5. Exploitation after discovery

VAPT Scope

1. Assets management
2. Threats and Vulnerability
3. Risk Management
4. Security Controls
5. Assessment Reports
6. Remediation Plans

VAPT Framework Coverage

The Vulnerability Assessment (VA)/ Penetration Testing (PT) services includes these activities:

- Network sniffing.
- IP and Port scanning .
- ARP spoofing .
- Access to the company network.
- Attempt to steal and deduce domain passwords.
- Search for possible vulnerabilities on layers 2,3 and 7 of the ISO / OSI stack.
- Using any vulnerabilities found to control systems / services.
- Analysis, verification and interpretation of the results

Why VAPT?

1. Information Technology Security Policy
2. Confidentiality, Integrity and Availability Assurance.
3. Avoidance of Network downtime because of attack.
4. Effective and efficient security life cycle.
5. Determining remediation plan for the appropriate security solutions, services and budgets.
6. Ensuring organizations meet cyber security compliance requirements.
